

Stone Forest bathtubs are carved from single blocks of granite and marble.

DESIGNS - STOCK OR CUSTOM

All of our bathtubs are carved to order. This allows us to offer any combination of options, including overflows, jets for spa applications, drain types and placement, and other design details such as flat or rolled rim and variations in the base. Please feel free to customize one of our standard designs, or create your own shape and size.

ALL tub sales require your sign-off on the specification drawing before we can process the order.

DRAINS

All of our tubs can be carved to accommodate virtually any drain, with or without overflows. Our standard design is carved to fit a Brasstech #270 lift & turn bath plug. Please let us know which drain model and style you plan on using at the time of ordering so we can ensure the correct fit.

If overflows are needed, we recommend using a Geberit cable-operated waste and overflow. They have varying cable lengths to fit any of our tub configurations, and have longer overflow screws and handle shafts available to adapt to our tubs. To accommodate the overflow, we drill through the wall of the tub and then carve a channel in the back wall to accommodate plumbing. (See specs for waste and overflow).

HANDLING & INSTALLATION

The entire base of the bathtub must be fully supported on a flat, continuous and non-deflecting surface.

An architect, engineer, or contractor should be consulted to make sure the floor structure can safely support our 1200 to 3500lbs bathtubs. Once filled with water, the effective weight will be 2000 to 4500 lbs depending on the style, size and type of stone. We do not arrange for inside deliveries or installation. You, your customer, or contractor may need to arrange for a local material handling company to assist with installation. Stone Forest has years of experience moving bathtubs and other heavy products. We are happy to share our know-how and can email you a slideshow on how to safely and easily move a bathtub into your showroom or a residence. Feel free to call us to discuss the possibilities.

Our stone bathtubs will seek the ambient room temperature. Customers building new homes commonly install radiant floor heating under the bathtub.
